

**Real people. Real stories. The Memorial Experience.**

# KEN

**“I’m indebted to everyone at Memorial.”**

*It never occurred to Ken that the numbness and tingling he felt in his toes might be caused by something serious.*

Then, his legs became weaker and he began to have trouble walking. Realizing he needed help, Ken turned to the Neuroscience Center at Memorial Regional Hospital. Doctors there diagnosed Ken’s spinal cord arteriovenous malformation – a very rare condition that could result in complete paralysis if not successfully treated.

“After exploring our options nationwide, my wife and I chose to have the surgery done at Memorial,” Ken says.

The highly complicated five-hour surgery was an amazing success and Ken is thankful to be walking. He and his wife are grateful to the distinguished neurosurgeons, and for Memorial’s special brand of patient- and family-centered care.

“We have complete faith in the neurosurgery team and everyone at Memorial,” Ken says. “I could not have received better care anywhere else.
